

Exceptionally Clean. Exceptionally Fast.

Parts that have high vertical edges or deep pockets are best processed in the WMT Table machines. Parts are blasted while the chamber table turns. This quick and meticulous cleaning process meets a wide range of production requirements for many surface preparation and conditioning applications.

All WMT machines are equipped with an integrated dust collection system and our high performance, one-piece cast airless centrifugal blast wheel designed to propel abrasive media in a controlled pattern and direction. Unlike other methods of surface cleaning and preparation, the chemical-free process of shot blasting does not add environmental pollutants.

These machines are designed for simple, inexpensive installation, requiring a minimum of floor space and no costly pits or duct work. And because each unit is pre-wired for quick and easy connection to a power supply, start-up costs and times are reduced to a minimum.

Summary of Benefits:

- COST EFFECTIVE
- MINIMAL MAINTENANCE
- REDUCED FLOOR SPACE REQUIREMENTS
- SUPERIOR CLEANING EFFICIENCY
- NO EXPENSIVE FOUNDATIONS REQUIRED
- INTEGRATED DUST COLLECTOR
- CHEMICAL-FREE PROCESS
